

GREASEPOINT

Improve Paper Mill Performance with Automatic Lubrication

WHY AUTOMATIC LUBRICATION?

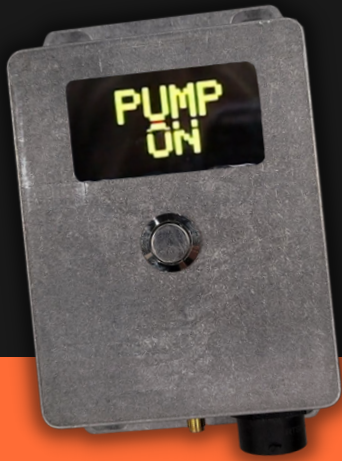

Equipment used in paper processing have about 1,500 different bearings that are exposed to harsh conditions including water, heat, steam, and paper dust.

In many mills, the operator is left to monitor machine lubrication, while also performing their normal duties. *GreasePoint helps people in manufacturing and construction with lubrication.* We offer automatic lubrication systems so the operator can focus on production & machine performance. The result is a safer work environment and the right amount of lubrication to all the bearings all the time, greatly reducing downtime.

Ask us about our in-house Pump Repair Services.

- Keep bearings free of contaminants and water
- Increased output
- User-Friendly Controls
- Extend bearing & component life
- Optional automatic refill shut-off
- Optional remote monitoring

GREASEALERT

An Exclusive Remote Lubrication Monitoring System

Communicates and alerts managers to potential problems that help avoid catastrophic failures.

Automatic Lubrication Products for Paper Processing

Graco's Injectors GL-1

Meets the needs of each lube point.

Graco's G3 Pump Series

Handle changing temperatures and challenging grease types.

Graco's GLC 2200 Controller

Alerts you to lube events, failures, and low lubrication levels

Bijur's Farval Dual Line Barrel Pump

For medium-heavy duty conditions

Bijur's WSE Chain Lubrication Unit

Gear wheel pump with 1.2 liter delivery volume

Bijur's OCS Oil Circulation

Lubricates bearings, gear trains, and other processes.
